

What is Driveline?

Charter Apps Driveline Software Suite is written for schools requiring a better way to handle student pickup. Driveline Dispatch is the application used by the schools staff to enter family ID's into the driveline system.

How it works:

Vehicles hang placards in their window with numbers indicating the families they are picking up. The staff member enters the family ID's into the iPod Touch or iPhone using this application. Within an instant, the child's names are displayed on a computer screen or projector in the classroom indicating where the child should go to find their awaiting vehicle.

No more kids wandering the parking lot looking for their vehicle. No more kids sitting in classrooms waiting for their name or number to be called over a static ridden two way radio and then missing their number when it is called! Driveline software tracks every family ID entered and sends those ID's out to each classroom instantly
